

AT A GLANCE

A photograph of a modern interior space. The ceiling is the focal point, featuring several cylindrical acoustic panels in a light beige color, mounted on a dark grey or black track. Recessed lighting is integrated into the ceiling. Below the ceiling, a wall is covered in dark wood paneling with a vertical grain. In the foreground, there is a lush green plant with yellow variegated leaves. To the right, a floor lamp with a thin metal stem and a circular, metallic shade is visible. A window or glass partition is partially seen on the right side, showing a reflection of the ceiling panels.

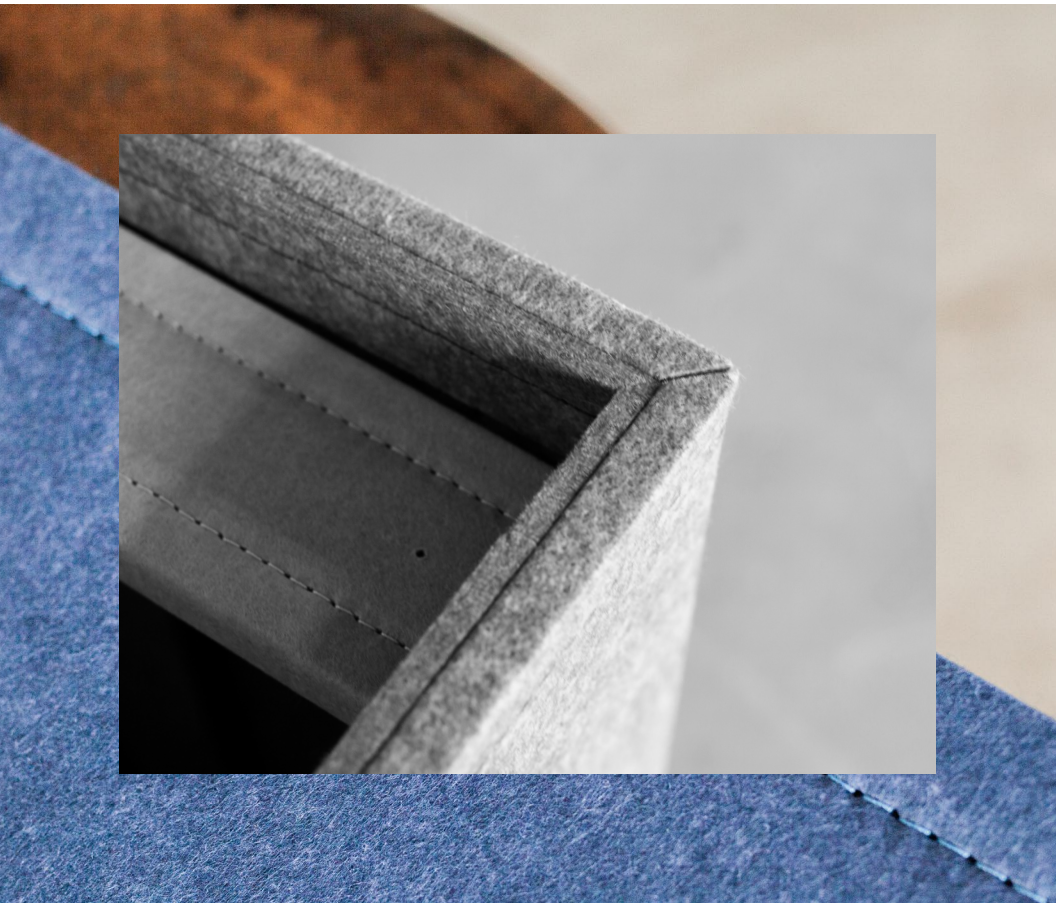

SABIN

Acoustics + Lighting

Sabin 101 →

SABIN IS THE FIRST COMPANY FOUNDED EQUALLY FOR ACOUSTICS AND LIGHTING

Sabin (pronounced sey-bin) strives to enable the most incredible human interaction. We provide designers with the building blocks to create unique, high-performing acoustic and lighting compositions.

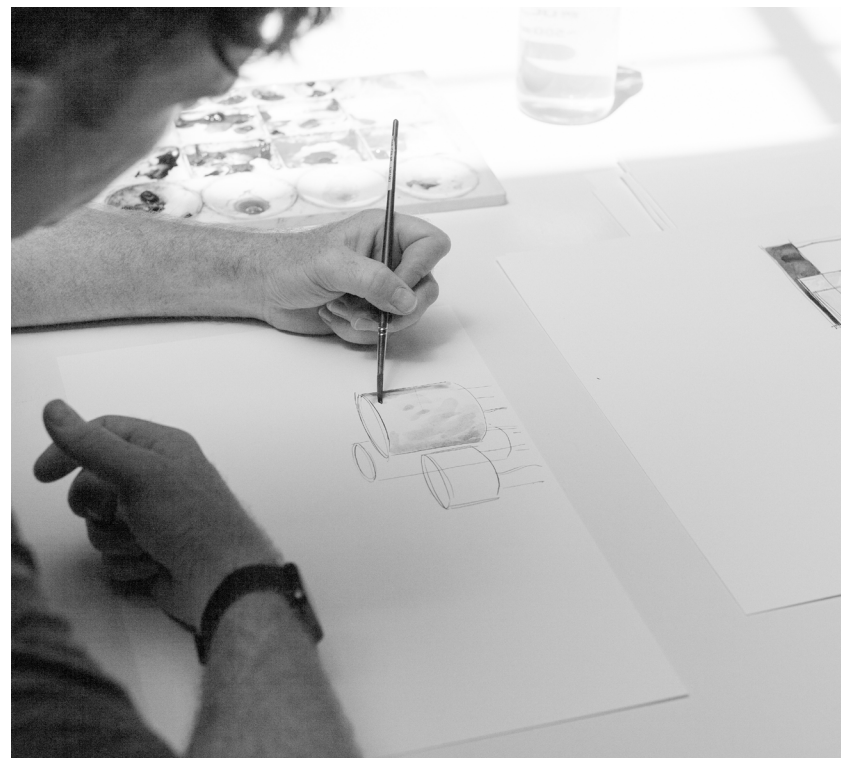

We build with post-consumer recycled PET felt, a powerful acoustic absorber, that's both SCS™ and OEKO-TEX® certified. Each piece is meticulously sewn with precision, using techniques rarely seen in the industry. Every stitch is not only functional but also enhances the aesthetic, making our products one-of-a-kind.

MADE IN CHICAGO, FROM START TO FINISH

Our expansive pre-war factory is a hub where skilled, local craftspeople drive in-house manufacturing and assembly alongside our operations. By collaborating closely throughout the building process, our product designers develop proprietary solutions and create pioneering products. Sabin's production approach not only ensures shorter lead times but also guarantees unparalleled quality and precision.

OUR PRODUCTS ARE FUNDAMENTALLY MODULAR— DESIGNED FOR DESIGNERS

Sabin product architecture is based on geometrically stable and fundamental forms, meant to be used as building blocks. Our high levels of customizability enable designers to achieve compositions they might not otherwise be able to create. More than a manufacturer, we're a design partner.

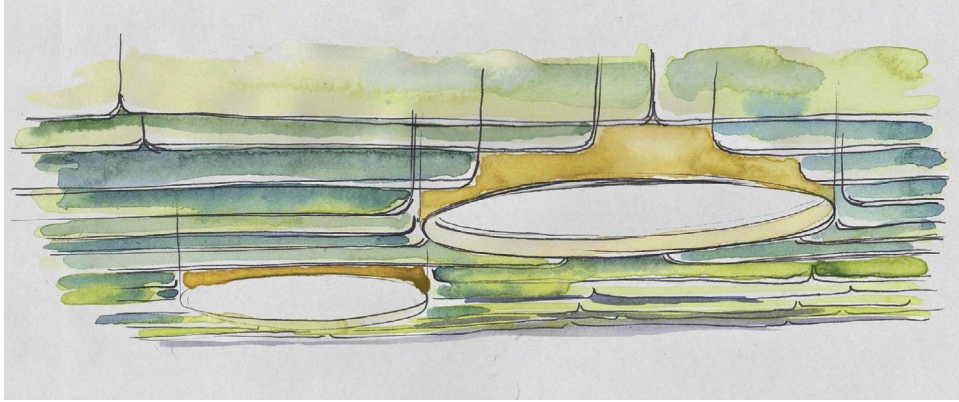

SOUND IS A VITAL SIGN

With NRC ratings over 0.95, our products absorb up to 95% of sound energy, neutralizing distractions in spaces with open concepts, hard surfaces, or high capacity. We ensure interiors remain comfortable and bright without compromising on design.

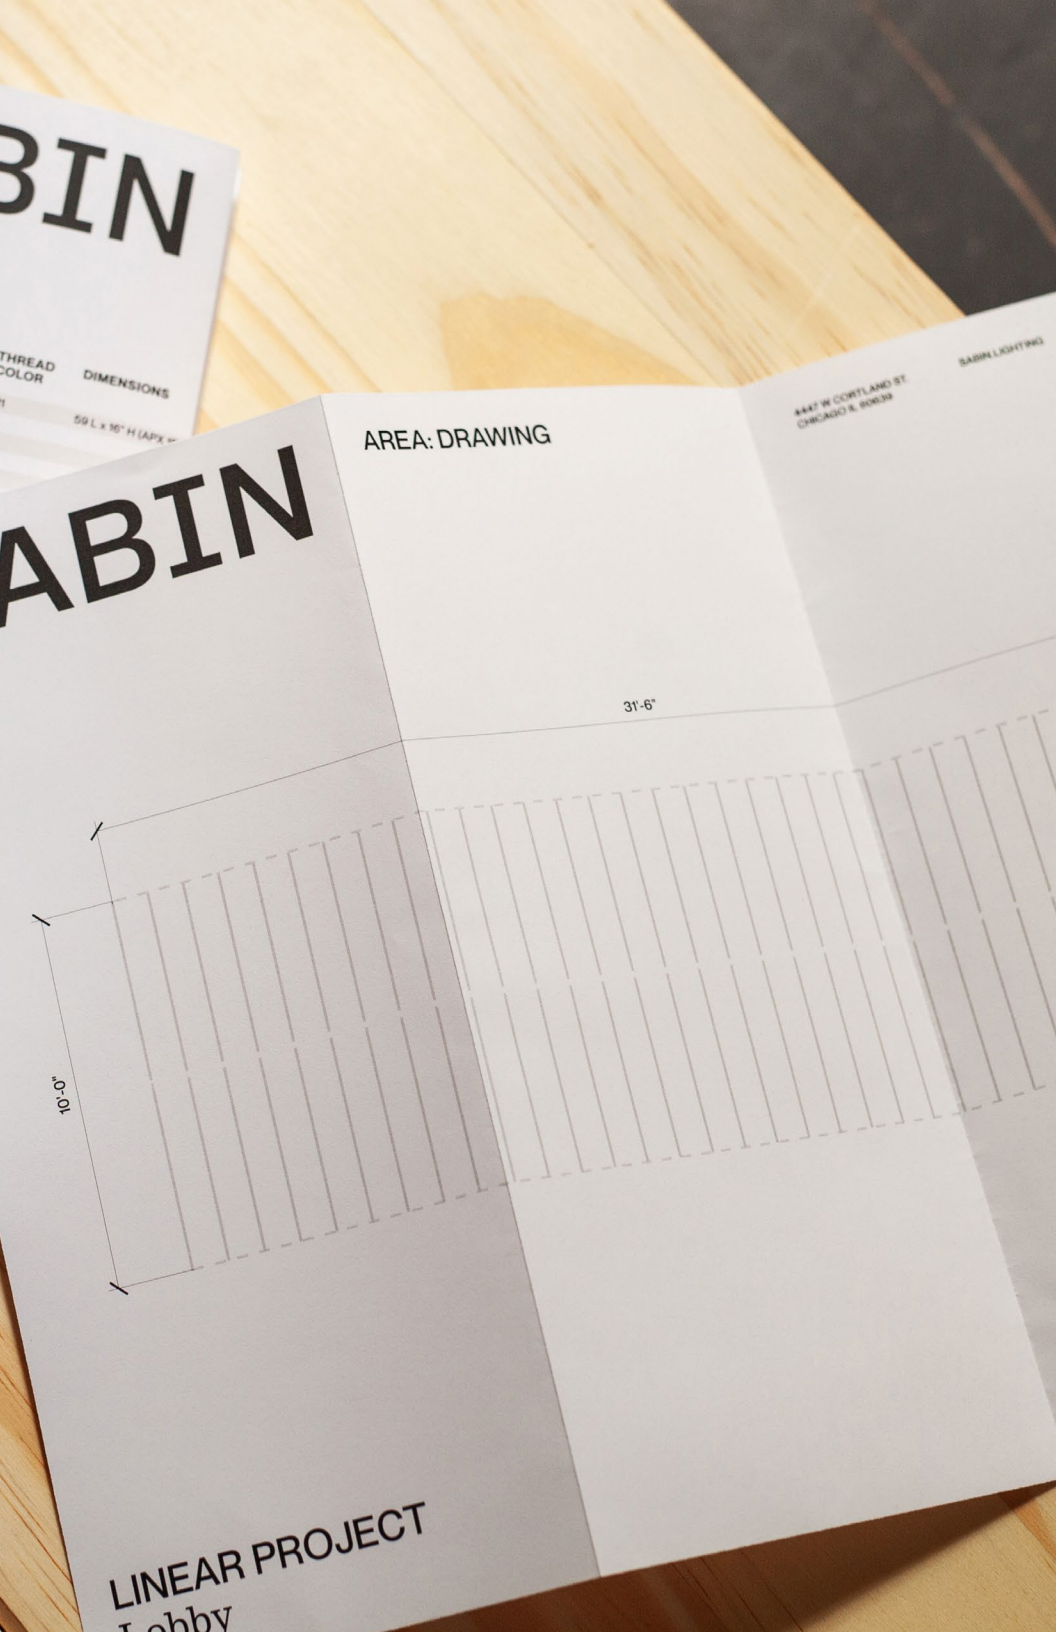

Configurations →

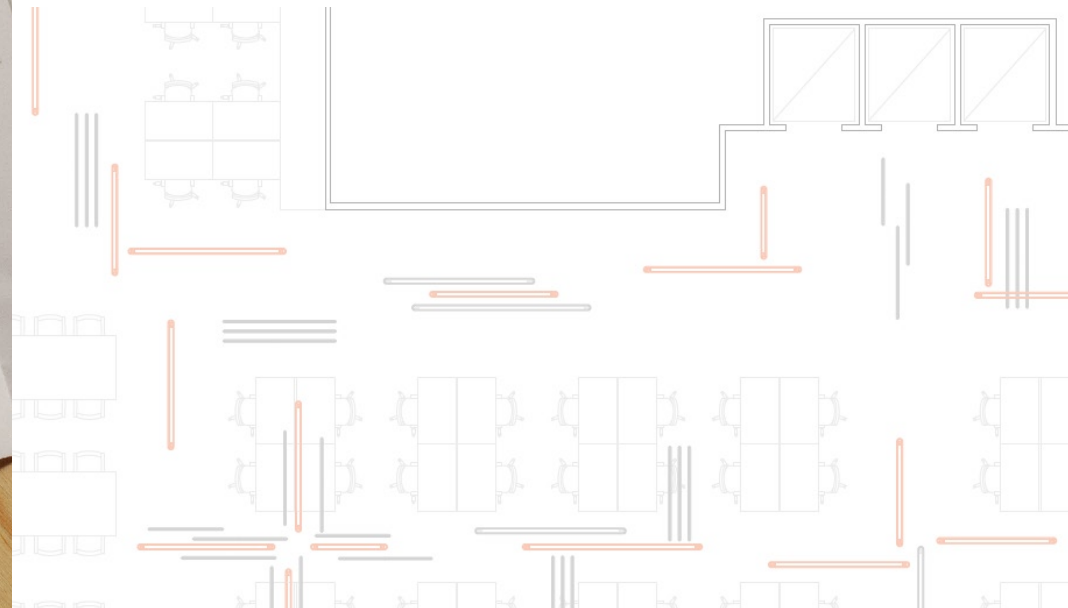

At Sabin, we use Embedded Arrays™ and bespoke computational design to create layouts with multiple product families, unlike anything else in the industry.

MADE TO BE A MIXED ECOSYSTEM

We create tailored configurations that shape environments and provide gestural cues, deepening the mind-body connection to a space.
