SABIN

Acoustics + Lighting

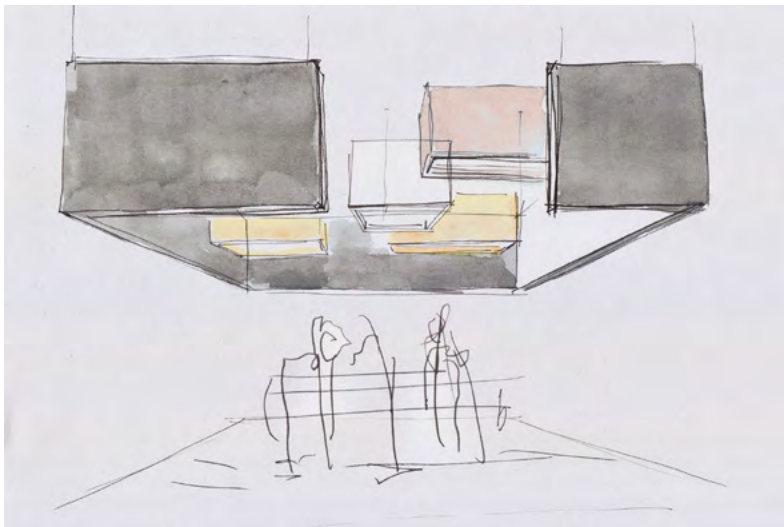

Sabin 101 →

SABIN IS THE FIRST COMPANY FOUNDED EQUALLY FOR ACOUSTICS AND LIGHTING

Sabin (pronounced sey-bin) provides designers with the building blocks to create unique, high-performing acoustic and lighting compositions. Whether it's an educational environment, workspace, healthcare or almost any environment, sound matters. From OSHA and LEED down to individual school districts, addressing sound in the built space is a necessary part of the design process.

Felt's high Noise Reduction Coefficient (NRC), post-consumer recycled content, and end-of-life recyclability, make it ideal for building unique design solutions. Sabin can help make your design statement, quietly.

MADE IN CHICAGO, FROM START TO FINISH

Our signature sewn construction not only elevates the industry standard for craftsmanship, it yields exceptional durability and promotes a more holistically sustainable product design without unnecessary or harmful materials.

Our expansive factory is a hub where skilled, local craftspeople drive in-house manufacturing and assembly alongside our operations. By collaborating closely throughout the building process, our product designers develop proprietary solutions and create pioneering products. Sabin's production approach not only ensures shorter lead times but also guarantees unparalleled quality and precision.

OUR PRODUCTS ARE FUNDAMENTALLY MODULAR— DESIGNED FOR DESIGNERS

Sabin product architecture is based on geometrically stable and fundamental forms, meant to be used as building blocks. Our high levels of customizability enable designers to achieve compositions they might not otherwise be able to create. More than a manufacturer, we're a design partner.

SABIN.DESIGN

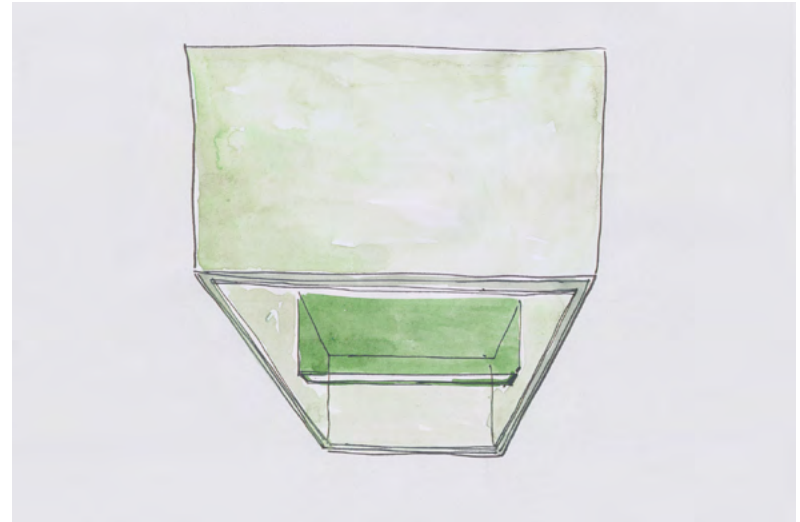

LINEAR PATTERNS

With up to 18 connections, STANDARD 60 and STADIA 60 can be arranged from simple extensions to complex, multi-directional configurations. Whether creating a bold ceiling installation or defining zones within a space, these modular junctions provide the flexibility to build intricate systems that go beyond standard layouts.

MADE TO BE A MIXED ECOSYSTEM

Building with Sabin →

At Sabin, we use **Embedded Arrays™** and bespoke computational design to create layouts with multiple product series and shapes, creating cohesion and whole-ceiling solutions unlike anything else in the industry.

SOUND IS A VITAL SIGN

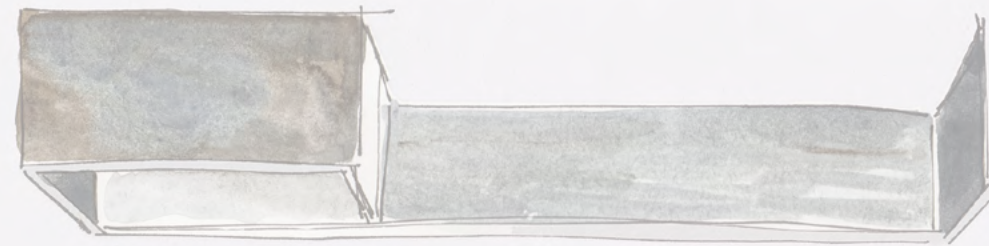

Whether it's an educational environment, workspace, healthcare or almost any environment, sound matters. From OSHA and LEED down to individual school districts, addressing sound in the built space is a necessary part of the design process. PET makes an excellent choice. With its high NRC, high post consumer content, recyclability combined with Sabin's flexible design solutions, we can help make your design statement – quietly.

PRIMARY LIGHTING

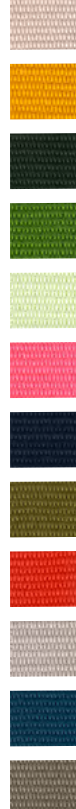

Sabin compositions are powerful enough to provide primary lighting to a space with up to 21,000 lumens per fixture on diffused lights and 1,500 lumens per linear foot on baffles. Our fixtures are compatible with any control devices and/or systems.

ANYTHING YOU SEE, YOU CAN SPECIFY

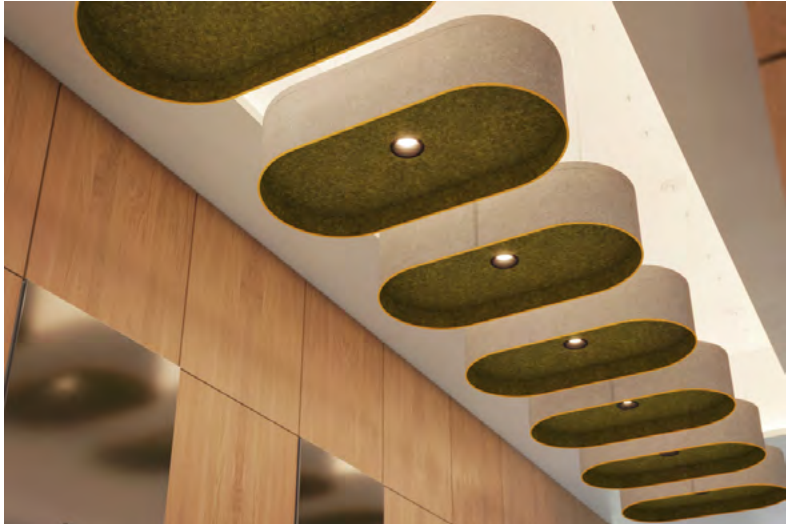

Our high levels of customizability set Sabin apart. Each series in our catalog has lit and unlit options and advanced material customization, allowing for colored power cords, contrasting thread, two-toned felt, and/or piping accents. In addition, fixtures can be mounted direct to strut, direct to grid, or suspended by aircraft cable, threaded rod, or our colorful straps.

A bold alternative to aircraft cable, our exclusive strap suspension expands design possibilities. Inspired by utilitarian materials, they bring purposeful, sculptural weight to any project. Sabin straps are crafted from durable polyester webbing, designed to be recyclable at facilities that accept No. 1 materials, just like our felt. ETL-approved and built for reliability, these straps reflect our commitment to improving industry standards.

Capabilities →

Sabin now offers accent piping on most* pendants. Piping is available in 14 colors and appears on the lower rim of the fixture. Our piping detail acts as a texture enhancer, when matching the colorway of the felt, or a contrasting element, when included as a pop of color.

*QUAD, TRI, OBFORMA, AND CYLINDER

Our 11 colored power cord options highlight the beauty in function and add another design-forward moment.
